

vaporizer

operating instructions

Remove the glass bowl carefully, plug in the vaporizer and turn on the power with the switch on the electricity cable. When operating your vaporizer for the first time, an initial heating period of 10 minutes is required to clean the bowl of any lubricant, oil or soldering get used during the manufacturing of this device.

WARNING! Do not touch the metal stem or bowl while the vaporizer is on!

The temperature will rise to 180 degrees!

On all subsequent uses, allow three to four minutes for the bowl to heat up before using. After this warm-up time, sprinkle a small amount of your smoking blend in the brass bowl and then place the glass bowl back on top. Watch as the glass bowl fills with vapor and begin inhaling through the tube whenever vapor/mist is visible. Once the vapor acquires a certain roasted taste or the bowl seems to be dusted, simply remove the glass bowl and tap out the bowl.

For the best results, smoking material should be moist as overly dry substances do not vaporise well. It is also best to crumble or fine your smoke-mix to increase its surface area, do not put too much in it.

Remember this is vapor and not smoke so just take a short soft toke. Enjoy your vaporizing experience!!!!!!!

Important information:

- Gently tap the bowl when emptying.
- Do not hit hard.
- Turn vaporizer off after use!
- Do not leave on for more than 20 minutes.
- Keep away from children.
- Enjoy your vaporizing experience!!!!!!!

!!!!!! WARNING THIS DEVICE OPERATES AT 220 volt !!!!!!!
